MEDICAL COVERAGE POLICY

SERVICE: Trigger Point Injection

Policy Number: 081
Effective Date: 03/01/2024
Last Review: 12/29/2023
Next Review: 12/29/2024

Important note: Unless otherwise indicated, medical policies will apply to all lines of business. Medical necessity as defined by this policy does not ensure the benefit is covered. This medical policy does not replace existing federal or state rules and regulations for the applicable service or supply. In the absence of a controlling federal or state coverage mandate, benefits are ultimately determined by the terms of the applicable benefit plan documents. See the member plan specific benefit plan document for a complete description of plan benefits, exclusions, limitations, and conditions of coverage. In the event of a discrepancy, the plan document always supersedes the information in this policy.

SERVICE: Trigger Point Injection

PRIOR AUTHORIZATION: Not required.

POLICY: Please review the plan’s EOC (Evidence of Coverage) or Summary Plan Description (SPD) for details. Not all plans cover this therapy.

Note: Unless otherwise indicated (see below), this policy will apply to all lines of business.

For Medicare plans, please refer to appropriate Medicare NCD (National Coverage Determination) or LCD (Local Coverage Determination). Medicare NCD or LCD specific InterQual criteria may be used when available. If there are no applicable NCD or LCD criteria, use the criteria set forth below.

For Medicaid plans, please confirm coverage as outlined in the Texas Medicaid Provider Procedures Manual | TMHP (TMPPM). If there are no applicable criteria to guide medical necessity decision making in the TMPPM, use the criteria set forth below.

BSWHP may consider trigger point injection(s) medically necessary, once Myofascial Pain Syndrome is established AND trigger points are identified, for the following:

- A trial of non-invasive medical management where symptoms have persisted despite three months of unsuccessful conservative treatment including but not limited to physical therapy, analgesics, exercise programs, ultrasound, OR
- As bridging therapy to medical management when trigger point injections are part of an overall treatment plan, OR
- When medical management is contraindicated or not appropriate

Limitations
- Only one trigger point procedure can be reported on any particular day, no matter how many sites or regions are injected.
- Trigger point injections are not performed more often than three sessions in a three-month period.

Exclusions
- Repeat therapeutic trigger point injections in the absence of clinical improvement in pain and function after the first diagnostic injections.
- Trigger point injections when performed with any substance other than local anesthetic with or without steroid (e.g., saline or glucose)
• Trigger point injections performed on the same day of service as other treatments in the same region

BACKGROUND:

Trigger point injections (TPI) are injections of a local anesthetic, with or without a steroid medication, into a painful area of a muscle that has the trigger point. The purpose of a TPI is to relax the area of intense muscle spasm, effectively inactivate the trigger point, and offer prompt symptomatic pain relief. TPI is the most common interventional technique used in pain medicine.

Myofascial trigger point is defined as a discrete, focal, hyperirritable spot found within a taut band of skeletal muscle or its fascia which when provocatively compressed causes local pain or tenderness as well as characteristic referred pain, tenderness and/or autonomic phenomena. Digital palpation, as well as needle insertion into the trigger point, can often lead to a local twitch response. A local twitch response is a transient visible or palpable contraction of the muscle. The presence of characteristic referred pain, tenderness, muscle shortening and/or autonomic phenomena (e.g., vasomotor changes, pilomotor changes, muscle twitches, etc.) is necessary to make the diagnosis of a myofascial trigger point. Tender points within a muscle or its fascia, which do not refer pain, tenderness and/or autonomic phenomena and lack a local twitch response, cannot be considered a myofascial trigger point.

MANDATES: None

CODES:

Important note: Due to the wide range of applicable diagnosis codes and potential changes to codes, an inclusive list may not be presented, but the following codes may apply. Inclusion of a code in this section does not guarantee that it will be reimbursed, and patient must meet the criteria set forth in the policy language

| CPT Codes | 20552 - Injection(s); single or multiple trigger point(s), 1 or 2 muscles(s)  
  | 20553 - Injection(s); single or multiple trigger point(s), 3 or more muscles(s)  |
|---|---|
| CPT Not Covered |  |
| ICD10 codes | M53.82 - Other specified dorsopathies, cervical region  
  | M54.2 - Cervicalgia  
  | M54.59 - Other low back pain  
  | M54.6 - Pain in thoracic spine  
  | M60.80 - Other myositis, unspecified site  
  | M60.811 - Other myositis, right shoulder  
  | M60.812 - Other myositis, left shoulder  
  | M60.819 - Other myositis, unspecified shoulder  
  | M60.821 - Other myositis, right upper arm  
  | M60.822 - Other myositis, left upper arm  
  | M60.829 - Other myositis, unspecified upper arm  |

REFERENCES:

The following scientific references were utilized in the formulation of this medical policy. BSWHP will continue to review clinical evidence related to this policy and may modify it at a later date based upon the evolution of the published clinical evidence. Should additional scientific studies become available and they are not included in the list, please forward the reference(s) to BSWHP so the information can be reviewed by the Medical Coverage Policy Committee (MCPC) and the Quality Improvement Committee (QIC) to determine if a modification of the policy is in order.
